Designing and Implementing an Azure AI Solution

Designing and Implementing an Azure Al Solution is intended for software developers wanting to build Al infused applications that leverage Azure Cognitive Services, Azure Cognitive Search, and Microsoft Bot Framework. The course will use C# or Python as the programming language.

Détails

• Code: Azure-Al

• Durée: 3 jours (21 heures)

Public

- Administrateurs
- Administrateurs de bases de données
- Administrateurs de Cloud
- Database Administrators
- Database Developers
- IT consultants
- IT development
- Professionnels de l'informatique
- Professionnels de l'IT
- Software engineer

Pré-requis

 Knowledge of Microsoft Azure and ability to navigate the Azure portal

Knowledge of either C# or Python

Objectifs

- Describe considerations for Al-enabled application development
- Create, configure, deploy, and secure Azure Cognitive Services
- Develop applications that analyze text
- Develop speech-enabled applications
- · Create applications with natural language understanding capabilities

Programme

Module 1: Introduction to AI on Azure

- Description
 - Artificial Intelligence (AI) is increasingly at the core of modern apps and services
 - In this module, you'll learn about some common Al capabilities that you can leverage in your apps, and how those capabilities are implemented in Microsoft Azure
 - You'll also learn about some considerations for designing and implementing AI solutions responsibly
- Lessons
 - o Introduction to Artificial Intelligence
 - o Artificial Intelligence in Azure
- After completing this module, students will be able to:
 - Describe considerations for creating Al-enabled applications
 - Identify Azure services for AI application development

Module 2: Developing AI Apps with Cognitive Services

- Description
 - Cognitive Services are the core building blocks for integrating AI capabilities into your apps
 - In this module, you'll learn how to provision, secure, monitor, and deploy cognitive services

Lessons

- o Getting Started with Cognitive Services
- Using Cognitive Services for Enterprise Applications
- Lab: Get Started with Cognitive Services
- Lab: Manage Cognitive Services Security
- o Lab: Monitor Cognitive Services
- o Lab: Use a Cognitive Services Container
- After completing this module, students will be able to:
 - o Provision and consume cognitive services in Azure
 - o Manage cognitive services security
 - Monitor cognitive services
 - · Use a cognitive services container

Module 3: Getting Started with Natural Language Processing

- Description
 - Natural Language processing (NLP) is a branch of artificial intelligence that deals with extracting insights from written or spoken language
 - In this module, you'll learn how to use cognitive services to analyze and translate text
- Lessons
 - Analyzing Text
 - Translating Text
 - o Lab: Translate Text
 - Lab: Analyze Text

Tél: +352 27 39 351 Fax: +352 27 39 52 68

Email: formation@oxiane.lu

- After completing this module, students will be able to:
 - Use the Text Analytics cognitive service to analyze text
 - Use the Translator cognitive service to translate text

Module 4: Building Speech-Enabled Applications

- Description
 - Many modern apps and services accept spoken input and can respond by synthesizing text
 - In this module, you'll continue your exploration of natural language processing capabilities by learning how to build speech-enabled applications
- Lessons
 - Speech Recognition and Synthesis
 - Speech Translation
 - o Lab: Recognize and Synthesize Speech
 - Lab: Translate Speech
- After completing this module, students will be able to:
 - Use the Speech cognitive service to recognize and synthesize speech
 - Use the Speech cognitive service to translate speech

Module 5: Creating Language Understanding Solutions

- Description
 - To build an application that can intelligently understand and respond to natural language input, you must define and train a model for language understanding
 - In this module, you'll learn how to use the Language Understanding service to create an app that can identify user intent from natural language input
- Lessons
 - Creating a Language Understanding App
 - Publishing and Using a Language Understanding App
 - Using Language Understanding with Speech
 - Lab: Create a Language Understanding Client Application
 - Lab: Create a Language Understanding App
 - Lab: Use the Speech and Language Understanding Services
- After completing this module, students will be able to:
 - o Create a Language Understanding app
 - Create a client application for Language Understanding
 - o Integrate Language Understanding and Speech

Module 6: Building a QnA Solution

- Description
 - One of the most common kinds of interaction between users and AI software agents is for users to submit questions in natural language, and for the AI agent to respond intelligently with an appropriate answer
 - In this module, you'll explore how the QnA Maker service enables the development of this kind of solution
- Lessons

- o Creating a QnA Knowledge Base
- o Publishing and Using a QnA Knowledge Base
- o Lab: Create a QnA Solution
- After completing this module, students will be able to:
 - Use QnA Maker to create a knowledge base
 - o Use a QnA knowledge base in an app or bot

Module 7: Conversational AI and the Azure Bot Service

- Description
 - Bots are the basis for an increasingly common kind of AI application in which users engage in conversations with AI agents, often as they would with a human agent
 - In this module, you'll explore the Microsoft Bot Framework and the Azure Bot Service, which together provide a platform for creating and delivering conversational experiences
- Lessons
 - Bot Basics
 - o Implementing a Conversational Bot
 - o Lab: Create a Bot with the Bot Framework SDK
 - Lab: Create a Bot with Bot Framework Composer
- After completing this module, students will be able to:
 - o Use the Bot Framework SDK to create a bot
 - Use the Bot Framework Composer to create a bot

Module 8: Getting Started with Computer Vision

- Description
 - Computer vision is an area of artificial intelligence in which software applications interpret visual input from images or video
 - In this module, you'll start your exploration of computer vision by learning how to use cognitive services to analyze images and video
- Lessons
 - Analyzing Images
 - Analyzing Videos
 - o Lab: Analyze Video
 - Lab: Analyze Images with Computer Vision
- After completing this module, students will be able to:
 - Use the Computer Vision service to analyze images
 - Use Video Analyzer to analyze videos

Module 9: Developing Custom Vision Solutions

- Description
 - While there are many scenarios where pre-defined general computer vision capabilities can be useful, sometimes you need to train a custom model with your own visual data
 - In this module, you'll explore the Custom Vision service, and how to use it to create custom image classification and object detection models
- Lessons
 - Image Classification
 - Object Detection
 - o Lab: Classify Images with Custom Vision
 - o Lab: Detect Objects in Images with Custom Vision
- After completing this module, students will be able to:
 - $\circ\;$ Use the Custom Vision service to implement image

Tél: +352 27 39 351 Fax: +352 27 39 52 68

Email: formation@oxiane.lu

classification

Use the Custom Vision service to implement object detection

Module 10: Detecting, Analyzing, and Recognizing Faces

- Description
 - Facial detection, analysis, and recognition are common computer vision scenarios
 - In this module, you'll explore the user of cognitive services to identify human faces
- Lessons
 - o Detecting Faces with the Computer Vision Service
 - Using the Face Service
 - o Lab: Detect, Analyze, and Recognize Faces
- After completing this module, students will be able to:
 - o Detect faces with the Computer Vision service
 - Detect, analyze, and recognize faces with the Face service

Module 11: Reading Text in Images and Documents

- Description
 - Optical character recognition (OCR) is another common computer vision scenario, in which software extracts text from images or documents
 - In this module, you'll explore cognitive services that can be used to detect and read text in images, documents, and forms
- Lessons
 - o Reading text with the Computer Vision Service
 - Extracting Information from Forms with the Form Recognizer service
 - o Lab: Read Text in Images

- o Lab: Extract Data from Forms
- After completing this module, students will be able to:
 - Use the Computer Vision service to read text in images and documents
 - Use the Form Recognizer service to extract data from digital forms

Module 12: Creating a Knowledge Mining Solution

- Description
 - Ultimately, many Al scenarios involve intelligently searching for information based on user queries
 - Al-powered knowledge mining is an increasingly important way to build intelligent search solutions that use Al to extract insights from large repositories of digital data and enable users to find and analyze those insights
- Lessons
 - o Implementing an Intelligent Search Solution
 - Developing Custom Skills for an Enrichment Pipeline
 - o Creating a Knowledge Store
 - Lab: Create a Custom Skill for Azure Cognitive Search
 - o Lab: Create an Azure Cognitive Search solution
 - Lab: Create a Knowledge Store with Azure Cognitive Search
- After completing this module, students will be able to:
 - Create an intelligent search solution with Azure Cognitive Search
 - Implement a custom skill in an Azure Cognitive Search enrichment pipeline
 - Use Azure Cognitive Search to create a knowledge store

Modalités

- Type d'action :Acquisition des connaissances
- Moyens de la formation :Formation présentielle 1 poste par stagiaire 1 vidéo projecteur Support de cours fourni à chaque stagiaire
- Modalités pédagogiques : Exposés Cas pratiques Synthèse
- Validation : Exercices de validation Attestation de stages
