

## Integrating On-Premises Core Infrastructure with Microsoft Azure

This 3-day instructor-led course covers a range of components, including Azure Compute, Azure Storage, and network services that customers can benefit from when deploying hybrid solutions.

In this context, the term hybrid means integrating infrastructure technologies that customers host in on-premises datacenters with Azure IaaS and PaaS services.

This course offers an overview of these services, providing the knowledge necessary to design hybrid solutions properly. It also includes a number of demonstrations and labs that enable students to develop hands-on skills that are necessary when implementing such solutions.

### Détails

- **Code :** Azure-IOPCI
- **Durée :** 3 jours ( 21 heures )

#### Public

- Administrateurs
- Administrateurs de bases de données
- Consultants
- Consultants informatiques
- Ingénieurs
- Professionnels de l'IT

#### Pré-requis

- Knowledge of :
  - Windows Server 2012.
  - Windows Server 2016 fundamentals.
  - Windows PowerShell.
  - Cloud computing basics.
- An understanding of:
  - On-premises virtualization technologies.
  - Network configuration.
  - Web applications.
  - Active Directory concepts.

### Objectifs

- Describe the core concepts of Azure
- Explain the primary methods for integrating an on-premises environment with Azure Virtual Machines and Azure Cloud Services
- Describe Azure hybrid networking technologies
- Describe the Azure services that provide data storage, management, and analytics capabilities in hybrid scenarios
- Explain the use of Azure disaster recovery and business continuity solutions for on-premises environments

### Programme

#### Module 1: Introduction to Microsoft Azure

- Description
  - This module starts with a general overview of cloud computing, and then focuses on Microsoft Azure and its technologies that offer integration opportunities
  - It also introduces the most common methods of interacting with Azure, including the Azure portals, Azure PowerShell, Azure Command-Line Interface (CLI), and Microsoft Visual Studio
  - The module concludes by covering Azure deployment models, which dictate how you provision and manage Azure services
- Lessons
  - Overview of cloud computing and Azure
  - Overview of the Azure deployment models
- Lab
  - Use Azure portal, Azure PowerShell, and Microsoft Visual Studio to deploy and manage Azure resources
  - Deploying Microsoft Azure VMs by using the Azure portal

- Deploying Azure VMs by using Azure PowerShell
- Creating and deploying an Azure Resource Manager deployment template
- Identify and delete newly deployed resources
- After completing this module, students will be able to:
  - Describe Microsoft Azure and its most common management
  - Describe the primary characteristics of Azure Resource Manager and classic deployment models

#### Module 2: Integrating with Azure Compute services

- Description
  - This module explores the different compute resources available in Azure in the context of hybrid scenarios
  - It first explains the differences between Azure Virtual Machines and Azure Cloud Services and how you can use each of them to migrate on-premises workloads
  - Next, it describes the process of migrating on-premises virtual machines to Azure by using virtual machine images and disks

- It also explains the process of extending Big Compute workloads to Azure by integrating them with on-premises high performance computing (HPC) deployments and by using Azure Batch
- The module concludes with an explanation on containers and Azure Service Fabric
- Lessons
  - Overview of Azure virtual machines and Azure cloud services
  - Migrating workloads to Azure virtual machines by using virtual machine images and disks
  - Extending HPC workloads to Azure
  - Integrating compute workloads by using containers and Azure Service Fabric
- Lab
  - Uploading an on-premises virtual disk file to Azure
  - Preparing for an upload of a virtual disk file to Azure
  - Uploading a virtual disk file to Azure
- Lab
  - Moving containers between on-premises Hyper V virtual machines and Azure virtual machines
  - Creating a Docker host by using Docker Machine
  - Deploying a private Docker Registry in Azure
- After completing this module, students will be able to:
  - Describe differences between Azure virtual machines and Azure cloud services
  - Migrate workloads to Azure virtual machines by using virtual machine images and disks
  - Explain how to extend on-premises HPC workloads to Azure
  - Integrate compute workloads by using containers and Azure Service Fabric

### Module 3: Integrating with Microsoft Azure virtual networks

- Description
  - This module introduces the Azure Virtual Network service and its components
  - It also describes how to implement Azure virtual networks and integrate them with your on-premises computing resources by establishing direct network connectivity between the two environments
- Lessons
  - Overview of Azure Virtual Network Service
  - Extending on-premises networks to Azure
- Lab
  - Implementing a point-to-site VPN by using Azure Resource Manager
  - Preparing a Microsoft Azure subscription for implementing a point-to-site VPN
  - Completing the point-to-site VPN setup
  - Testing a point-to-site VPN from an on-premises virtual machine
- After completing this module, students will be able to:
  - Implement Azure virtual networks
  - Configure cross-premises connectivity with Azure virtual networks

### Module 4: Integrating with Azure Storage and data services

- Description
  - This module starts with a description of Azure Storage types and their capabilities
  - It then describes Azure Backup, StorSimple hybrid storage solution, Microsoft SQL Server Stretch Database, Azure Data Factory with Data Management Gateway, and Azure Content Delivery Network
  - It concludes with a detailed walkthrough of the implementation of Azure Recovery Services agent-based and Microsoft Azure Backup Server-based backups
- Lessons
  - Overview of Azure Storage and data services
  - Implementing Azure Backup for on-premises workloads
- Lab
  - Implementing the Azure Recovery Services agent-based backups
  - Preparing your Microsoft Azure subscription for the implementation
  - Configuring a virtual machine for Azure Recovery Services agent-based backups
  - Testing the backup of the virtual machine files and folders
  - Testing the restore of the virtual machine files and folders
- After completing this module, students will be able to:
  - Describe the architecture and functionality of Azure Storage and data services
  - Implement different Azure Backup types, including agent-based backup and Azure Backup Server

### Module 5: Designing and implementing Azure Site Recovery solutions

- Description
  - This module presents the main features of Azure Site Recovery and the scenarios it supports
  - It also describes the planning considerations for Azure Site Recovery, the different types of implementations of Azure as a disaster recovery site for on-premises workloads, and the disaster recovery capabilities that StorSimple offers
  - You will become familiar with the process of planning Site Recovery deployment and will step through a sample deployment
- Lessons
  - Overview of Site Recovery
  - Planning for Site Recovery
  - Implementing Site Recovery with Azure as the disaster recovery site
- Lab
  - Implementing protection of on-premises Hyper-V virtual machines in Azure by using Site Recovery
  - Preparing your Microsoft Azure subscription for implementing Site Recovery

- Preparing your Hyper-V host for the implementation
- Configuring Site Recovery protection of a Hyper-V virtual machine
- After completing this module, students will be able to:
  - Describe the different scenarios that Site Recovery supports
  - Identify the factors that you must take into account when planning for Site Recovery
  - Explain the high-level steps that are necessary to implement Site Recovery in the Microsoft System Center Virtual Machine Manager environment

## Module 6: Designing and implementing cross-premises applications

- Description
  - This module presents the most common solutions that facilitate implementation of cross-premises applications, including Azure RemoteApp, Traffic Manager, and Hybrid Connections with the Web Apps feature of Azure App Service
  - It also describes the process of implementing cross-premises solutions for desktop, web, and mobile apps
- Lessons
  - Overview of cross-premises application capabilities and their design considerations
  - Implementing cross-premises solutions for desktop, web, and mobile apps
- Lab
  - Implementing Traffic Manager
  - Creating two instances of an organizational website using the Web Apps feature of Azure App Service
  - Creating and configuring an Azure Traffic Manager profile
  - Testing the distribution of traffic targeting the Azure Traffic Manager profile
- After completing this module, students will be able to:
  - Describe the capabilities of cross-premises applications and their design considerations

- Implement cross-premises solutions for desktop, web, and mobile apps

## Module 7: Integrating operations and application monitoring and management

- Description
  - This module presents Azure-based services that deliver monitoring and management functionality for on-premises workloads
  - These services include Microsoft Operations Management Suite with its Log Analytics, Microsoft Azure Automation with its support for on-premises systems based on Hybrid Runbook Worker functionality, and Visual Studio Application Insights
  - This module also describes the process of implementing cross-premises Azure monitoring and management solutions
- Lessons
  - Overview of the cross-premises monitoring and management capabilities of Microsoft Azure
  - Implementing cross-premises Azure monitoring and management solutions
- Lab
  - Implementing Azure Automation
  - Creating and configuring an Operations Management Suite workspace
  - Creating and configuring an Azure Automation account
  - Configuring an on-premises computer as a Hybrid Runbook Worker
  - Running a runbook on a Hybrid Runbook Worker and examining the outcome
- After completing this module, students will be able to:
  - Describe the cross-premises monitoring and management capabilities of Azure, including their architecture and extensibility
  - Implement cross-premises monitoring solutions, including Log Analytics, Azure Automation Hybrid Runbook Worker, and Visual Studio Application Insights

## Modalités

- **Type d'action** :Acquisition des connaissances
- **Moyens de la formation** :Formation présentielle – 1 poste par stagiaire – 1 vidéo projecteur – Support de cours fourni à chaque stagiaire
- **Modalités pédagogiques** :Exposés – Cas pratiques – Synthèse
- **Validation** :Exercices de validation – Attestation de stages
